

In the claims:

Please amend the claims as follows:

Spur b1

1. (amended) Optical sight comprising:
an elongate housing defining a light channel;
a lens located at one end of the light channel and having a partially reflecting surface;
a laser diode for emitting light towards said reflecting surface to produce a light spot by direct imaging of [the] said laser diode on said reflecting surface, said light spot being [to be] superimposed on a target when sighting through the light channel from an opposite [the other] end thereof;
a battery for providing electric current; and
an energizing [energising] circuit for energizing [energising] said laser diode, operable to apply a pulsating electric current from said battery to said laser diode source for causing the laser diode to emit pulses of light.

A1

4. (amended) Optical sight as in claim 1 wherein control means are provided for energizing [energising] the laser diode when a [the] weapon to which said optical sight is mounted is to be used and for automatically reducing energization [energisation] of the laser diode in dependence of a predetermined condition.
